

# Robotics in the 21st Century

by  
*Calum T. Dalek*

A study in the proto-Dalek

The Daleks are masters of Earth. But it was not always this way. For thousands of years prior to the creation of the first Dalek, *homo sapiens sapiens* (humans) ruled this planet.

They invented a field called “robotics” where they developed primitive machines that had a limited capacity to think. Eventually, they developed such good machines to cause the birth of the Dalek race.

Attend this talk to discover why mechanical lifeforms superceded the flexible, but ultimately squishy and inferior human beings.
